Original use	The “trigl” was initially wooden and later metal. Along with the “krutca”, it served for collecting the ore from the ground and pouring it into the “trugca” pit cart. Ten to twelve trigls were required to fill the “trugca” pit cart (300 kg). It was also used for throwing the packing material – pit tailings, burned ore, gravel or sand. After the excavation ended, the pit shafts needed to be filled with material.
Present use	The “trigl” is being preserved, secured and presented as an important monument of Idrija technical mining heritage with exceptional universal values. It is a part of the CUDHg mining collection. Visitors can view it within the permanent museum display Anthony's Main Road. It is a part of the presentation that represents the entire story of mining in the Idrija Mercury Mine. Together with the “krutca” (a tool resembling a large hoe), “trugca” pit cart and carbide lamp it represents manual ore excavation, which was in force in the Idrija Mercury Mine at the beginning of the 20th century.
Original location	The Pit of the Idrija Mercury Mine.
Present location	Anthony’s Main Road, Kosovelova 3, SI-5280 Idrija

STATE OF CONSERVATION

History of conservation:	The “trigl” is well preserved. It was restored for the purpose of the permanent museum display. Additional interventions are not necessary. Security of the premises is ensured.
Present state	good
Necessary activities:	Regular seasonal maintenance.
